

DepEd Commons Forum

Role

UX Research, UX Design

Timeframe

1.5 months

Tools

Miro, Figma

The Situation

Since the COVID-19 pandemic, the Department of Education (of the Philippines) has transitioned into modular learning where students learn half of their lessons through online or printed modules. These have been published on DepEd Commons.

The Problem

Due to the lack of interaction, teachers have had trouble holding students accountable for completing modules.

On the other side of things, students have had trouble seeking help in completing their modules.

The Solution

DepEd Commons Forum is an accessible platform that facilitates distance learning by allowing students and teachers to communicate about modules in an simplified manner.

The Research

Interviews and secondary research allowed me to empathize with my users and construct **user personas, competitive analysis, site maps, and user flows.**

Primary Persona

Philippine public school **teachers**.

Angela Dela Cruz, 28

📍 Pampanga, Philippines
Grade 6 Public School Teacher

"I want to help my students learn and become successful, but distance learning makes this hard to achieve."

About:

Angela is passionate about what she does and will do all it takes to ensure that her students receive access to a proper education despite current circumstances.

Tasks:

Identify learning competencies
Print lesson material
Teach module content
Communicate with students

Goals:

Ensure students have **access** to modules
Ensure students are **understanding** the material
Efficiently manage time
Learn more tools to help with distance learning

Challenges:

Poor internet connection
Incomplete Submissions
Inability to properly help students
Difficulties in communication

Needs:

A channel for asynchronous communication
A way to help students complete modules
Better connectivity for students

Tools:

Google Meet

Microsoft Teams

Google Classroom

Messenger

Google Sheets

DepEd Commons

Gabriel Bautista, 33

📍 Caloocan, Philippines

Grade 8 Public School Teacher

"I want to my students to be able to engage in lessons despite the transition to distance or asynchronous learning."

About:

Benjamin cares about his students. He knows the lengths students go through to obtain an education and wants to help students achieve their goals by engaging them in lessons and by making help more easily accessible.

Tasks:

Identify learning competencies

Create engaging material

Provide access to material

Answer questions students have

Goals:

Ensure students have **access** to modules

Ensure students are **engaged** during lessons

Ensure students **understand** the material

Make material accessible in **different formats**

Challenges:

Not all students have access to tech

Students are less engaged online

Hard to help asynchronously

Students don't know each other

Needs:

A minimal tech approach to accessing lessons

More efficient distribution of printed material

Better ways to help students asynchronously

Tools:

Zoom

Messenger

PowerPoint

Google Sheets

ClassJn

DepEd Commons

Secondary Persona

Philippine public school **students**.

Benjamin Reyes, 11

📍 Caloocan, Philippines

Grade 6 Student

"I want to study hard so that I can be successful and be able to help my parents out when I grow up."

About:

Benjamin is a hard-working student trying to stay on top of his work, but for harder subjects, there is no available help.

Tasks:

Attend lectures

Access lesson material

Answer modules

Submit completed modules

Challenges:

Poor internet connection

No help available

Struggle to understand material

Less accountability

Tools:

Google Meet

Google Classroom

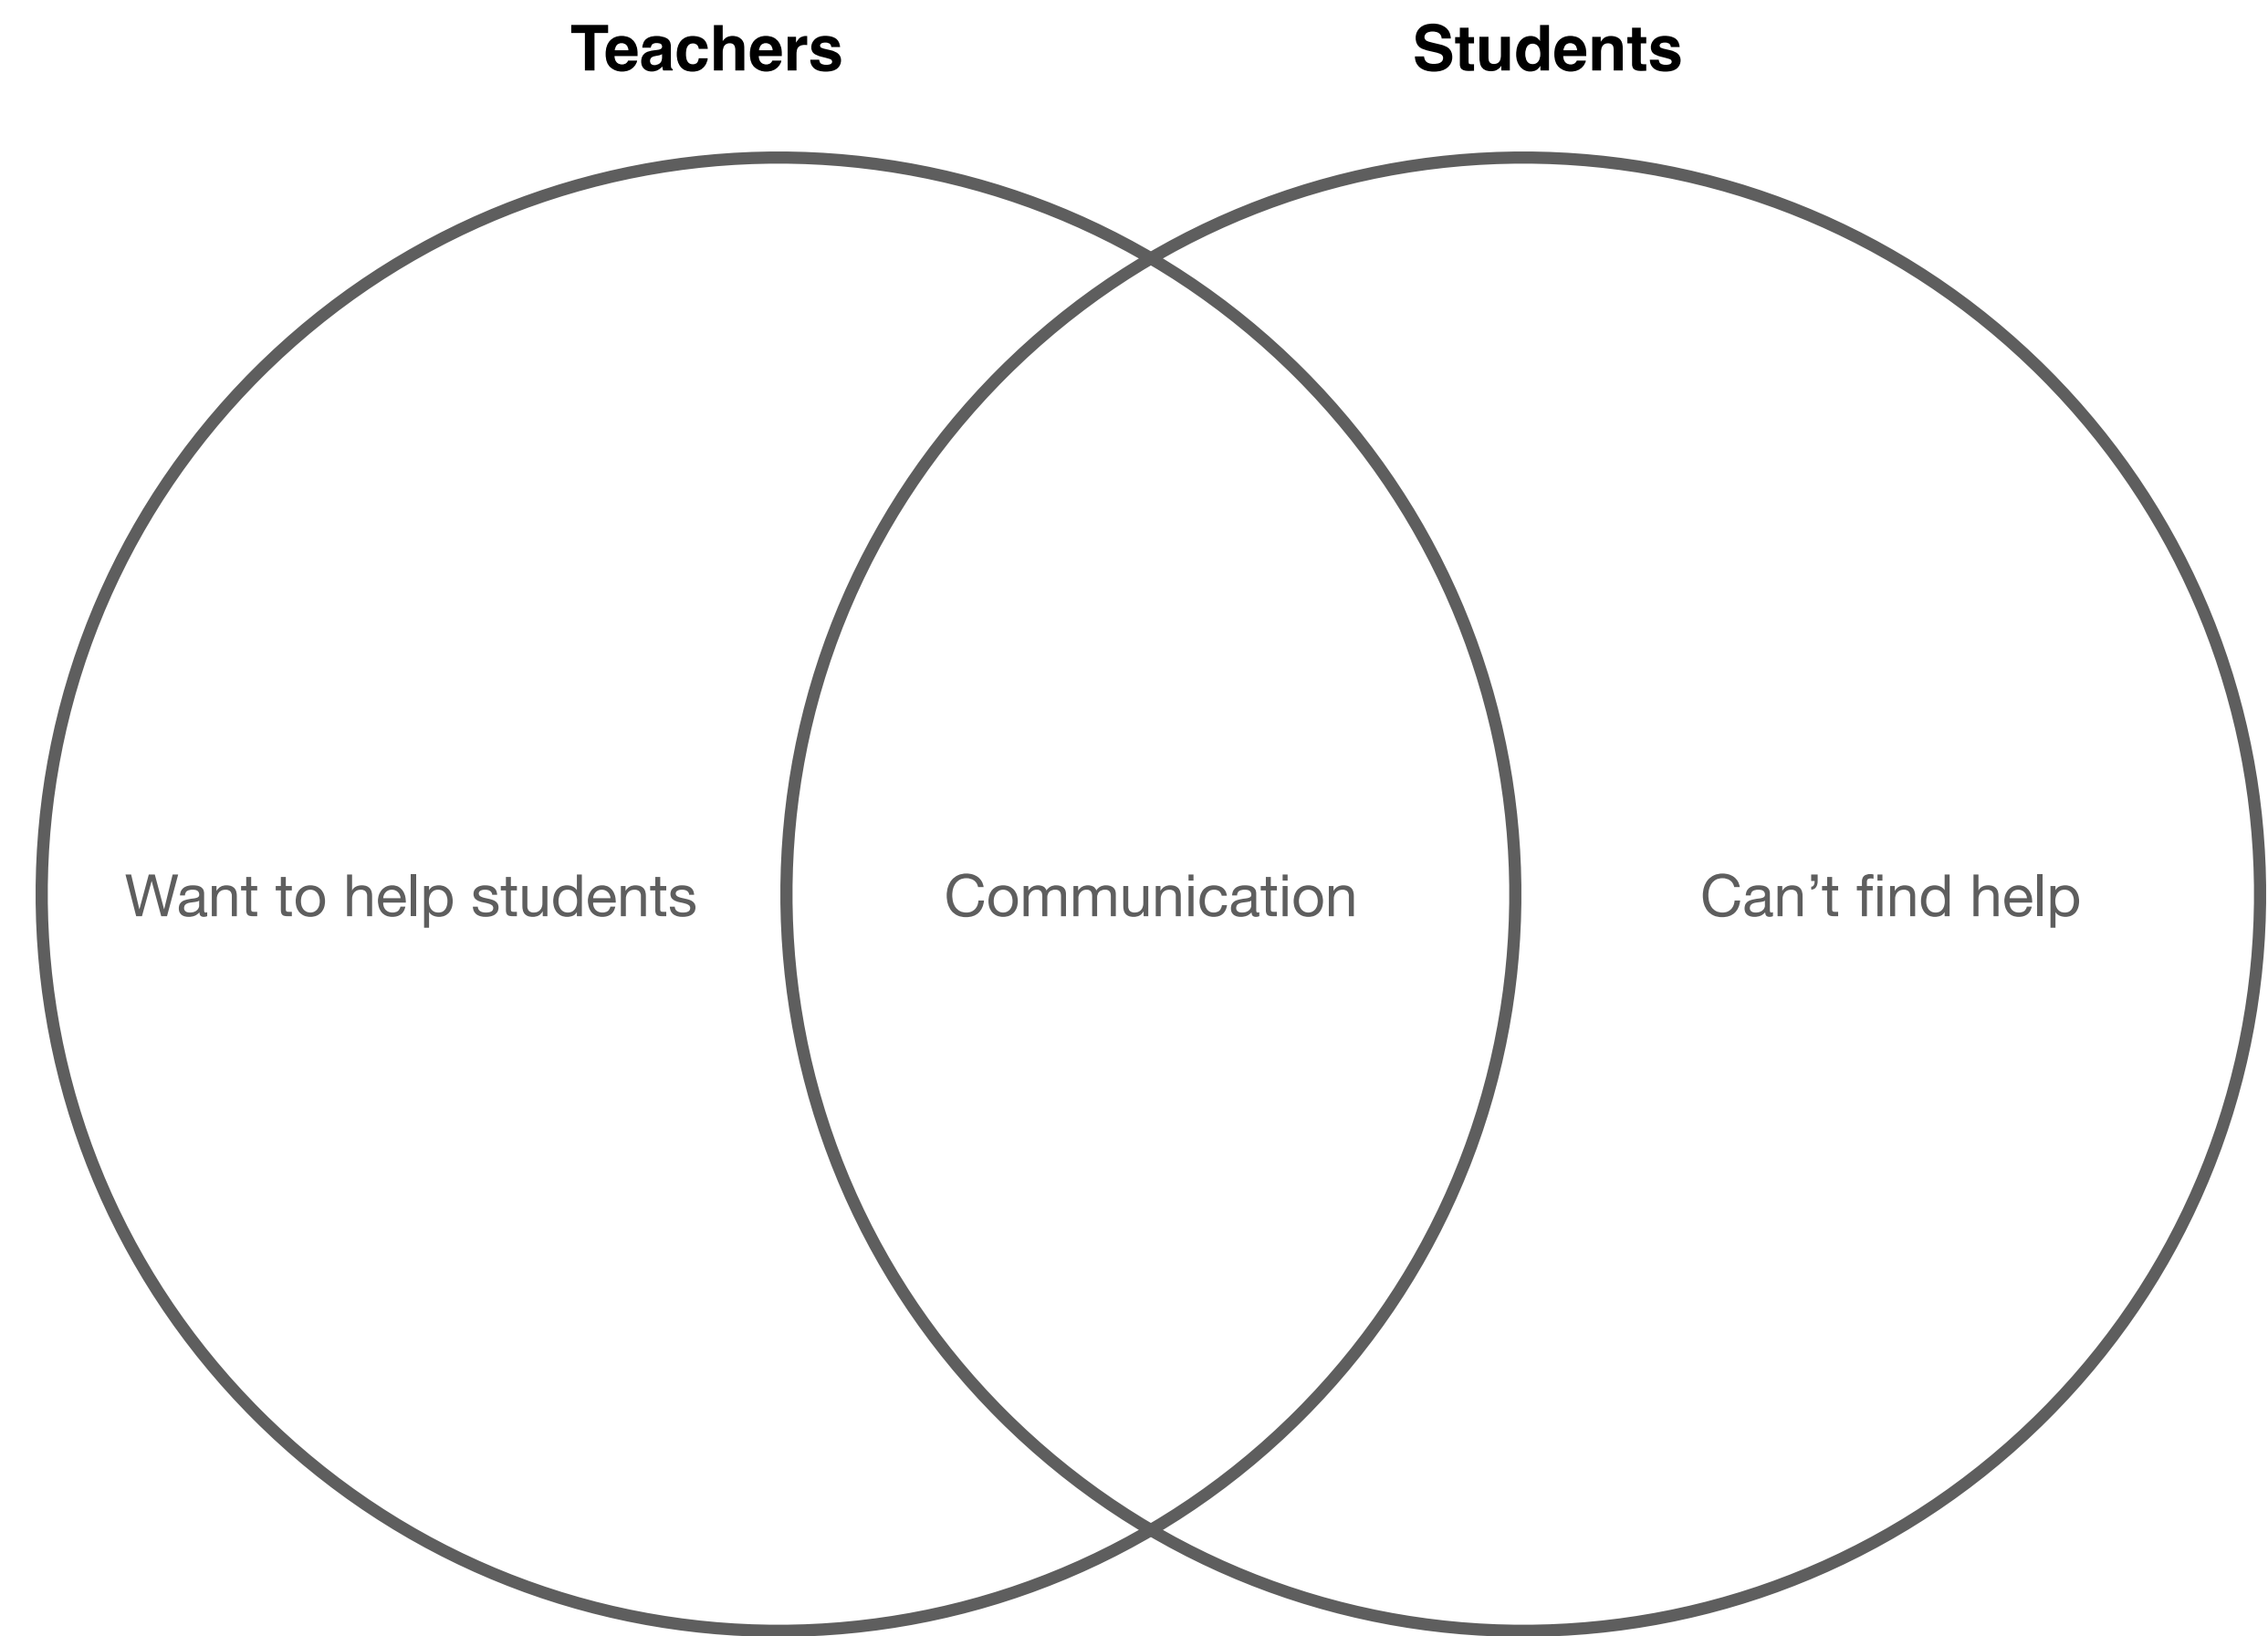

Messenger

Patterns:

Teachers need a way to ensure students understand the lessons.

Students need a way to find help in completing their lessons.

The gap in between is communication.

What already exists?

In order to create a platform for communication, I needed to gain a better understanding of what already exists and is being used.

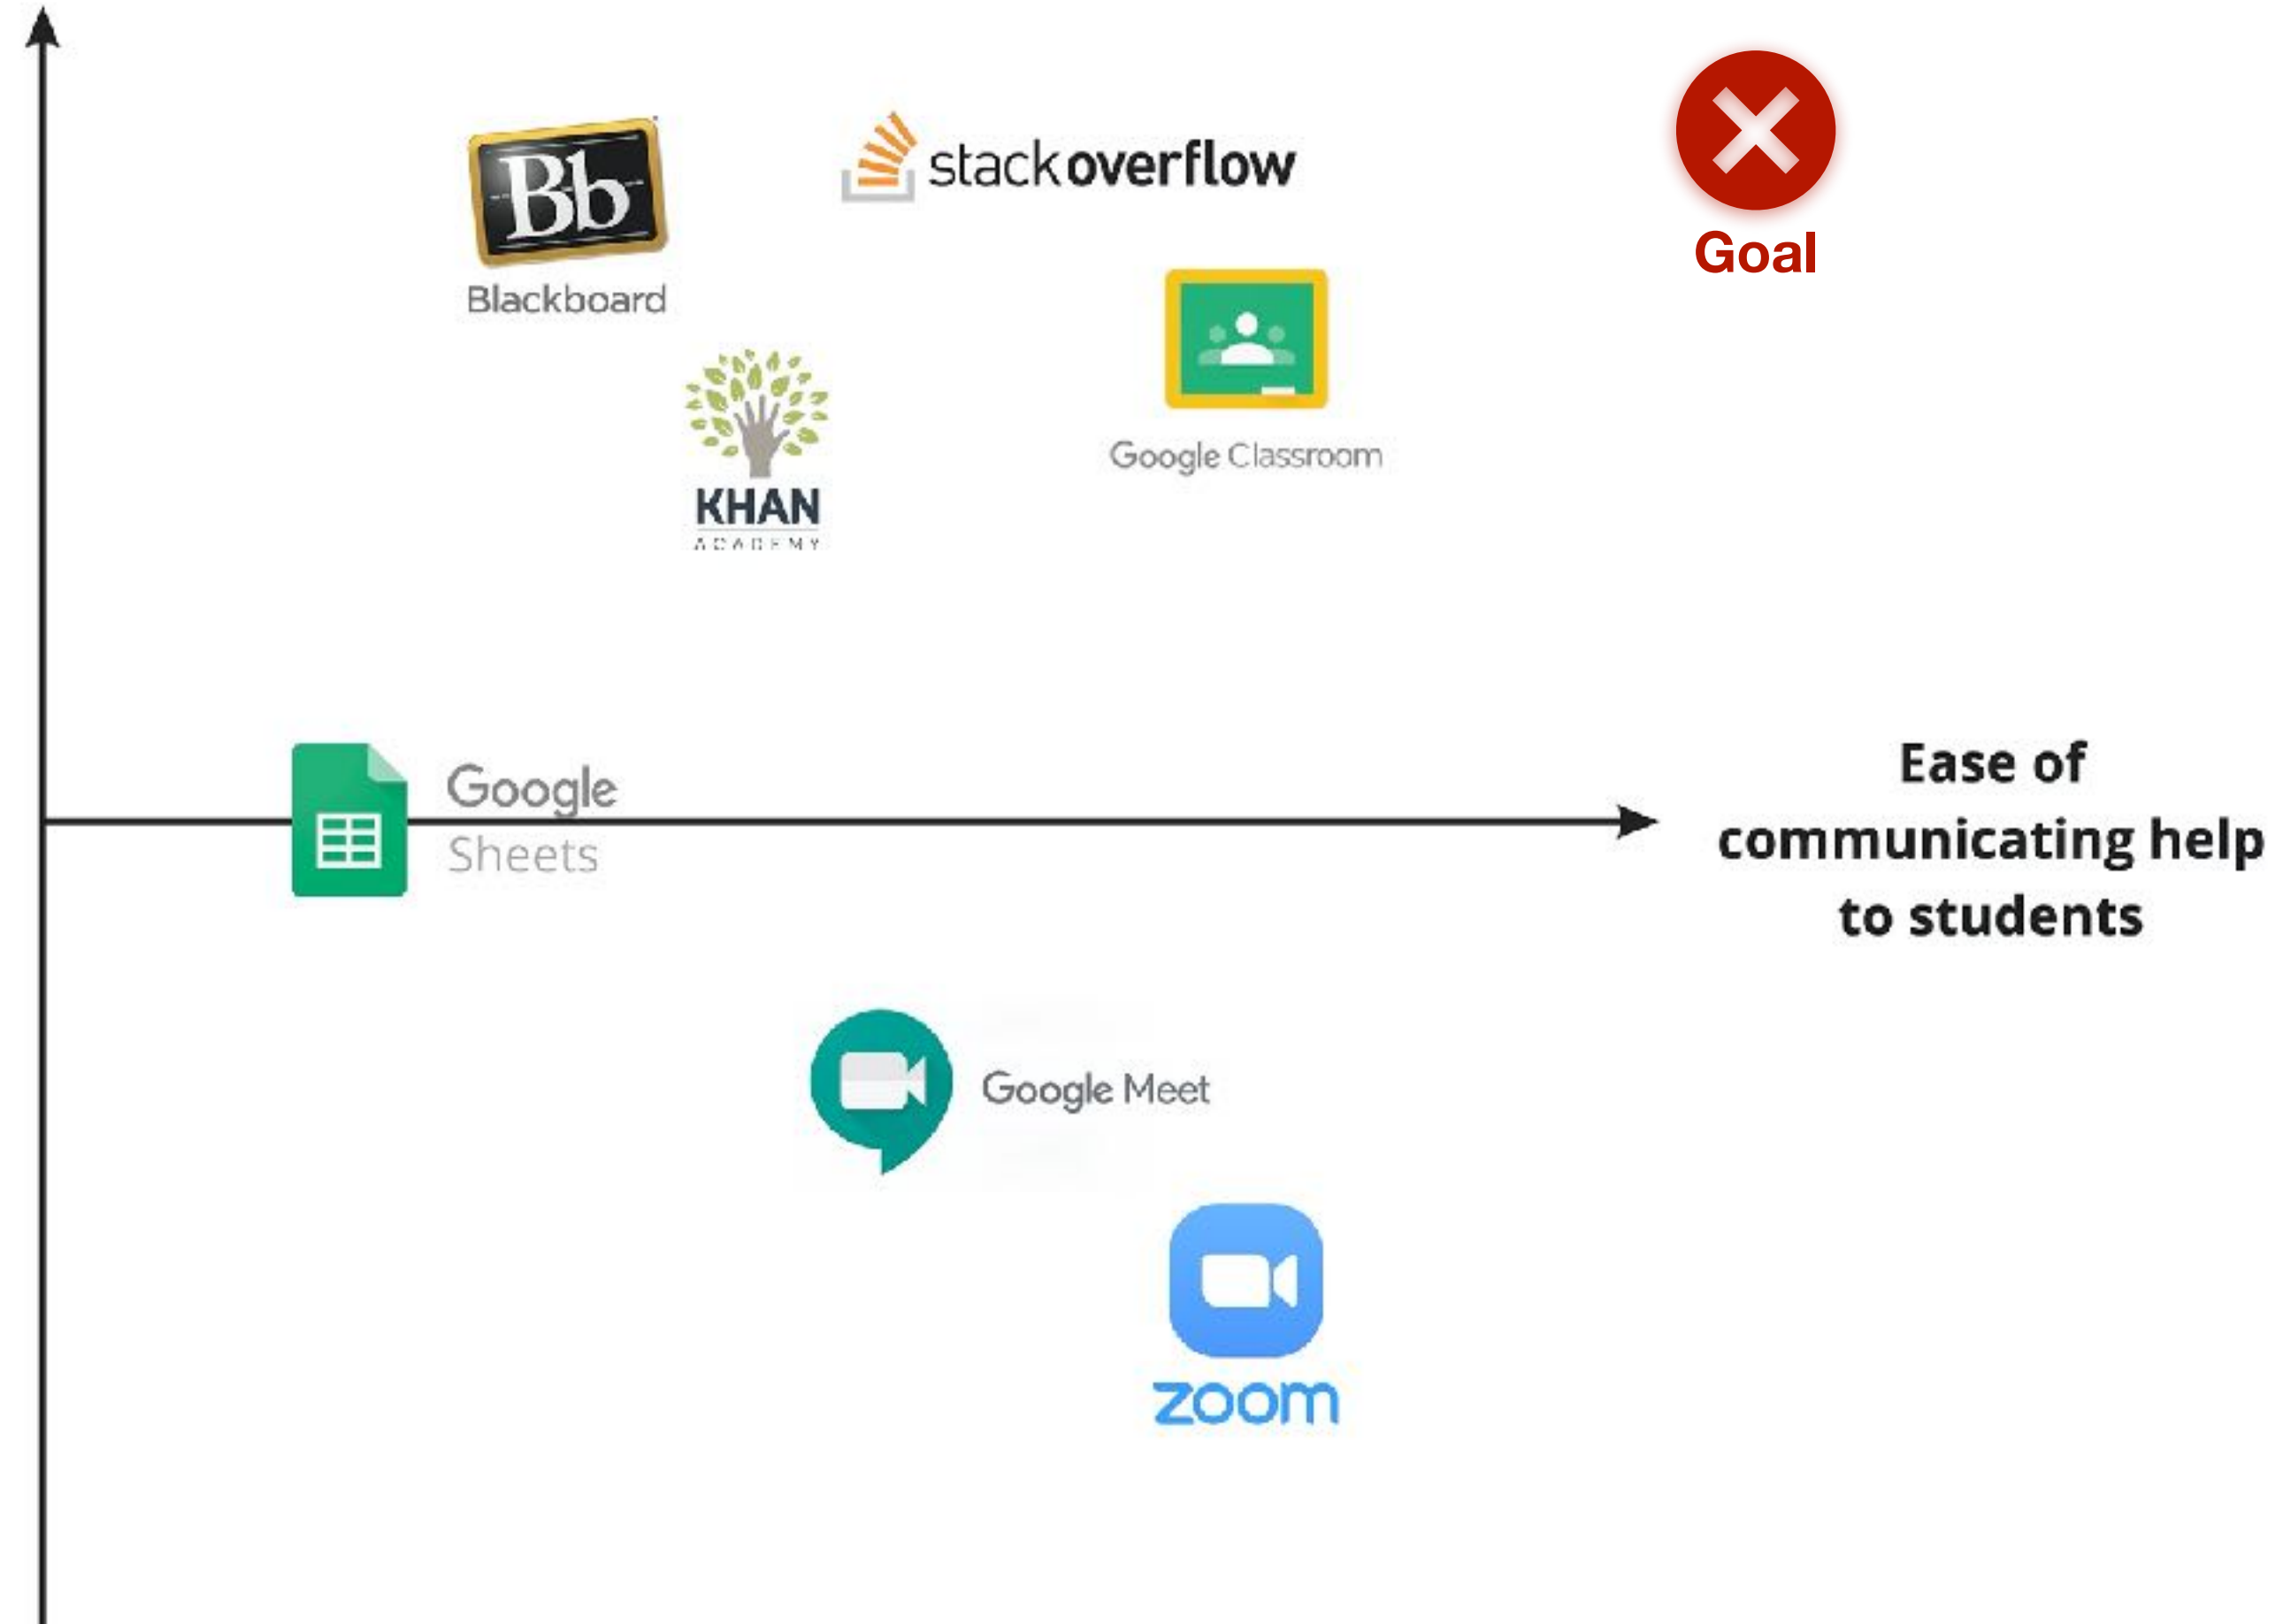

I went about this by listing out needs teachers and students had and conducting competitive analysis.

	Direct		Indirect				
	Google Classroom	Blackboard	Gmeet	Stack Overflow	Zoom	Khan Academy	Google Sheets
Alternative Access (SMS/Paper)							
Assign Homework							
Provide Resources							
Asynchronous Communication							
Asynchronous Access							
Forum / Q&A							
Organize Answers by Module							
Homework Discussion							
Answer Verification							

} Synchronous communication is common, but may be detrimental when messages are drowned out

} Modular learning is a new concept. Not a lot is out there to accommodate it.

Asynchronous Communication

Synchronous Communication

Feature Prioritization

With a better idea of features to include, I had to prioritize.

The MoSCoW Method

Must

- Forum
- Tagging
- Filter by subject

Should

- Responsive features
- SMS capabilities
- Print Requests

Could

- Linking to Module Section
- Image upload
- Audio / Video solutions

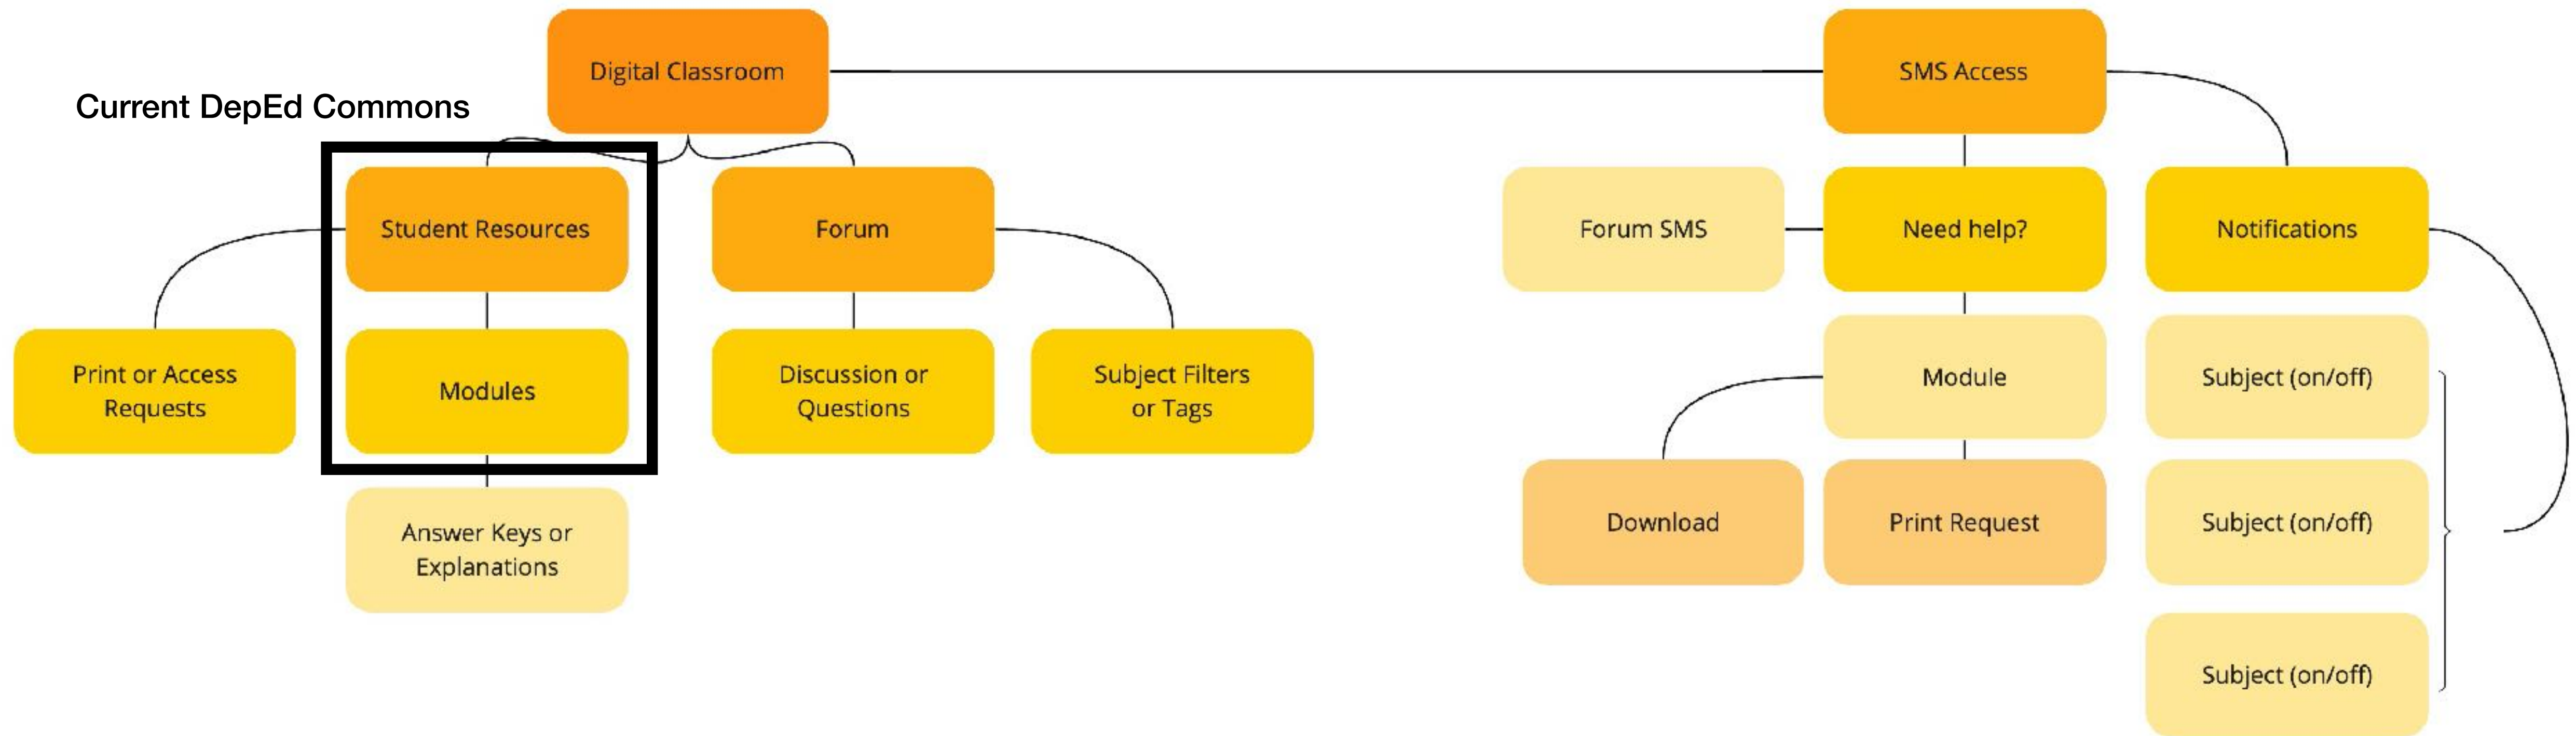

Would Like

- Highlighting & commenting on PDFs
- Statistics (Module areas and learning competencies frequently asked about)

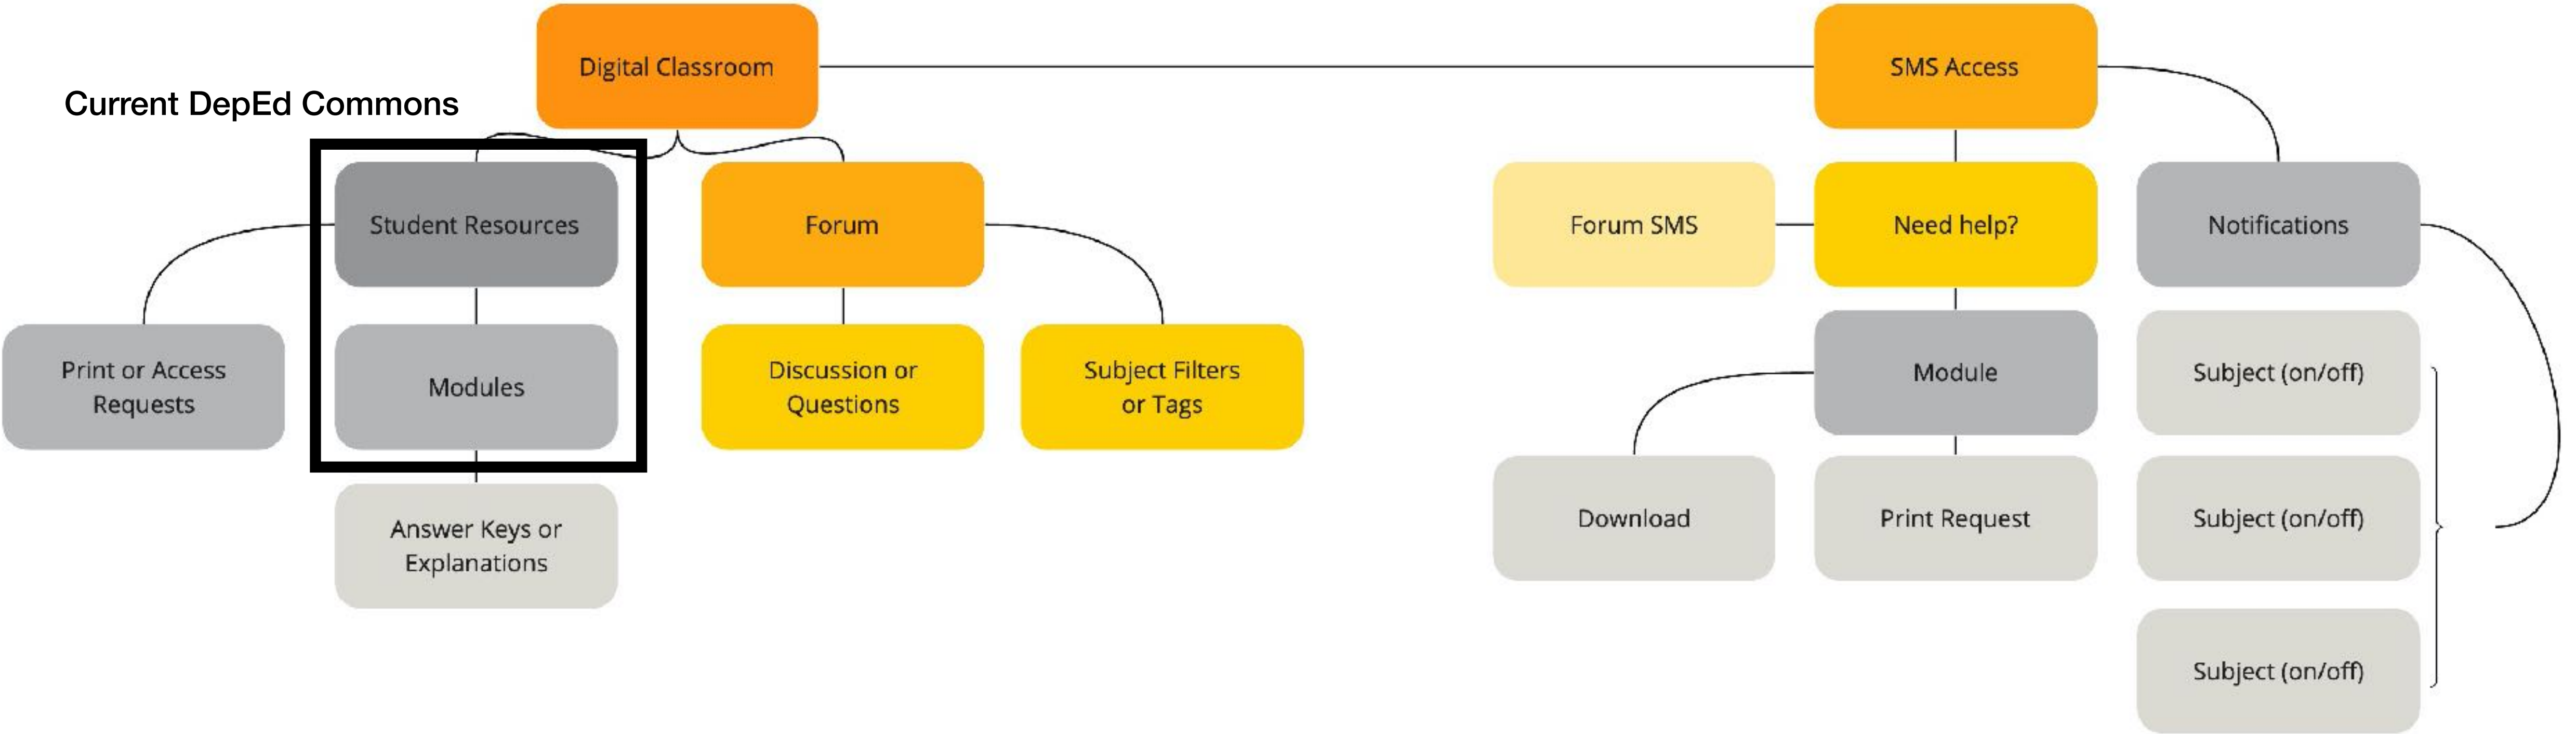

Preparing a solution

Prior to creating wireframes, I created a site map that took into account the current DepEd Commons and created a user flow to better understand how things will work.

Site Map: Future Goal

Site Map: MVP For Forum Feature

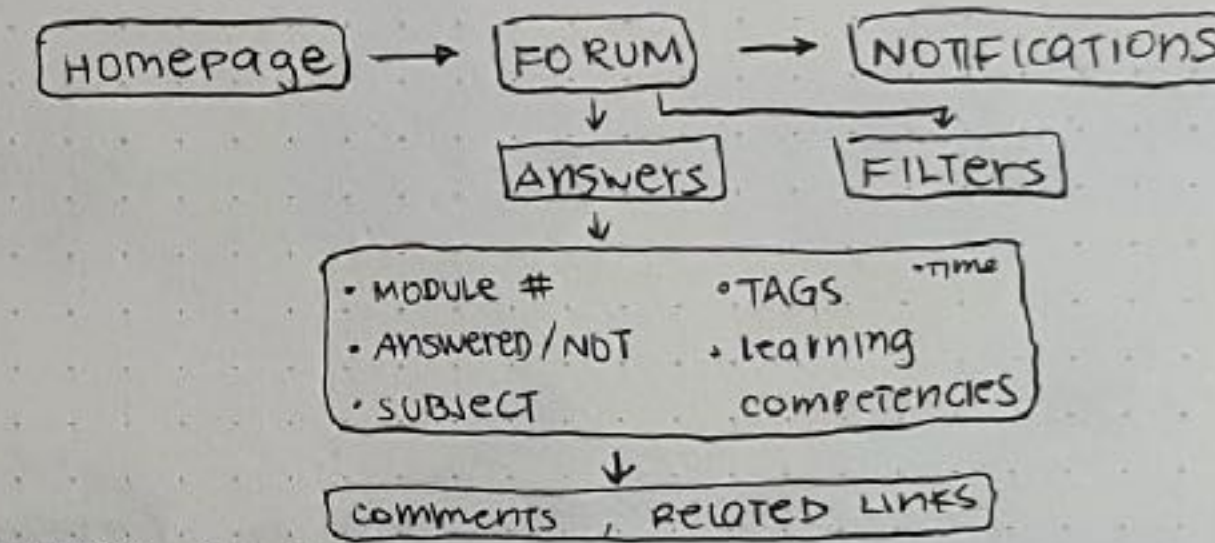

User Flow Study and Draft

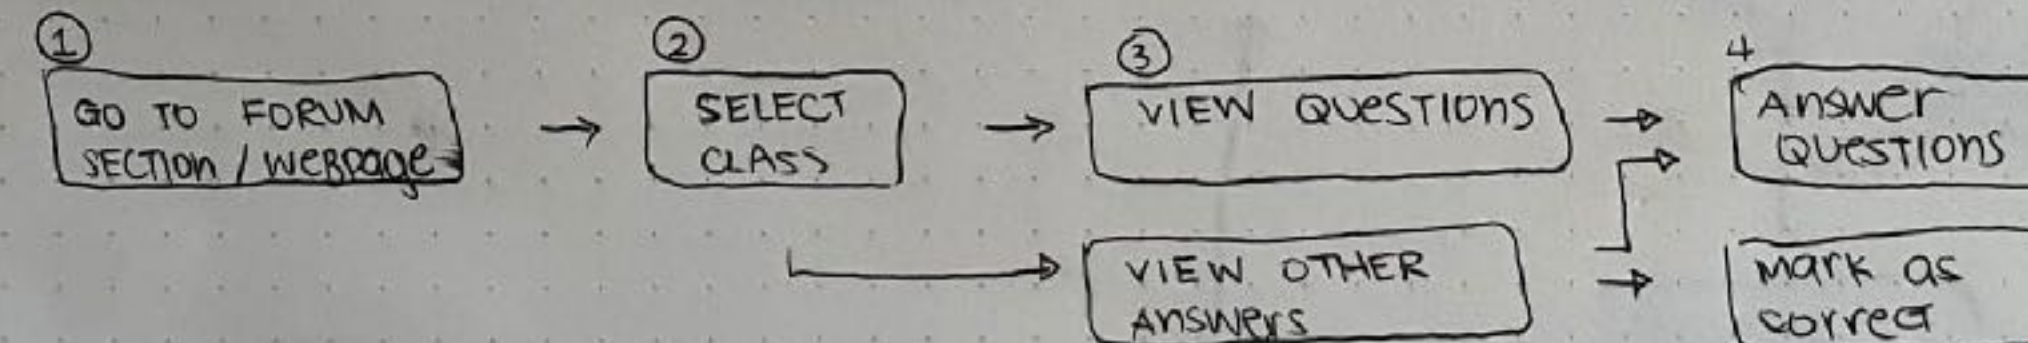

ELEMENTS:

- HOMEPAGE
- FORUM
- COMMENTS
- ANSWER
- correct/answered
- MODULE number
- SUBJECT
- NOTIFICATIONS
- HELPFUL / NOT
- RELATED LINKS
- TAGS
- FILTERS
- Learning competency
- TIME

GROUPING + HIERARCHY:

USER FLOW (DRAFT) FOR TEACHER RESOLVING / ANSWERING QUESTION

USER FLOW (GOOGLE CLASSROOM)

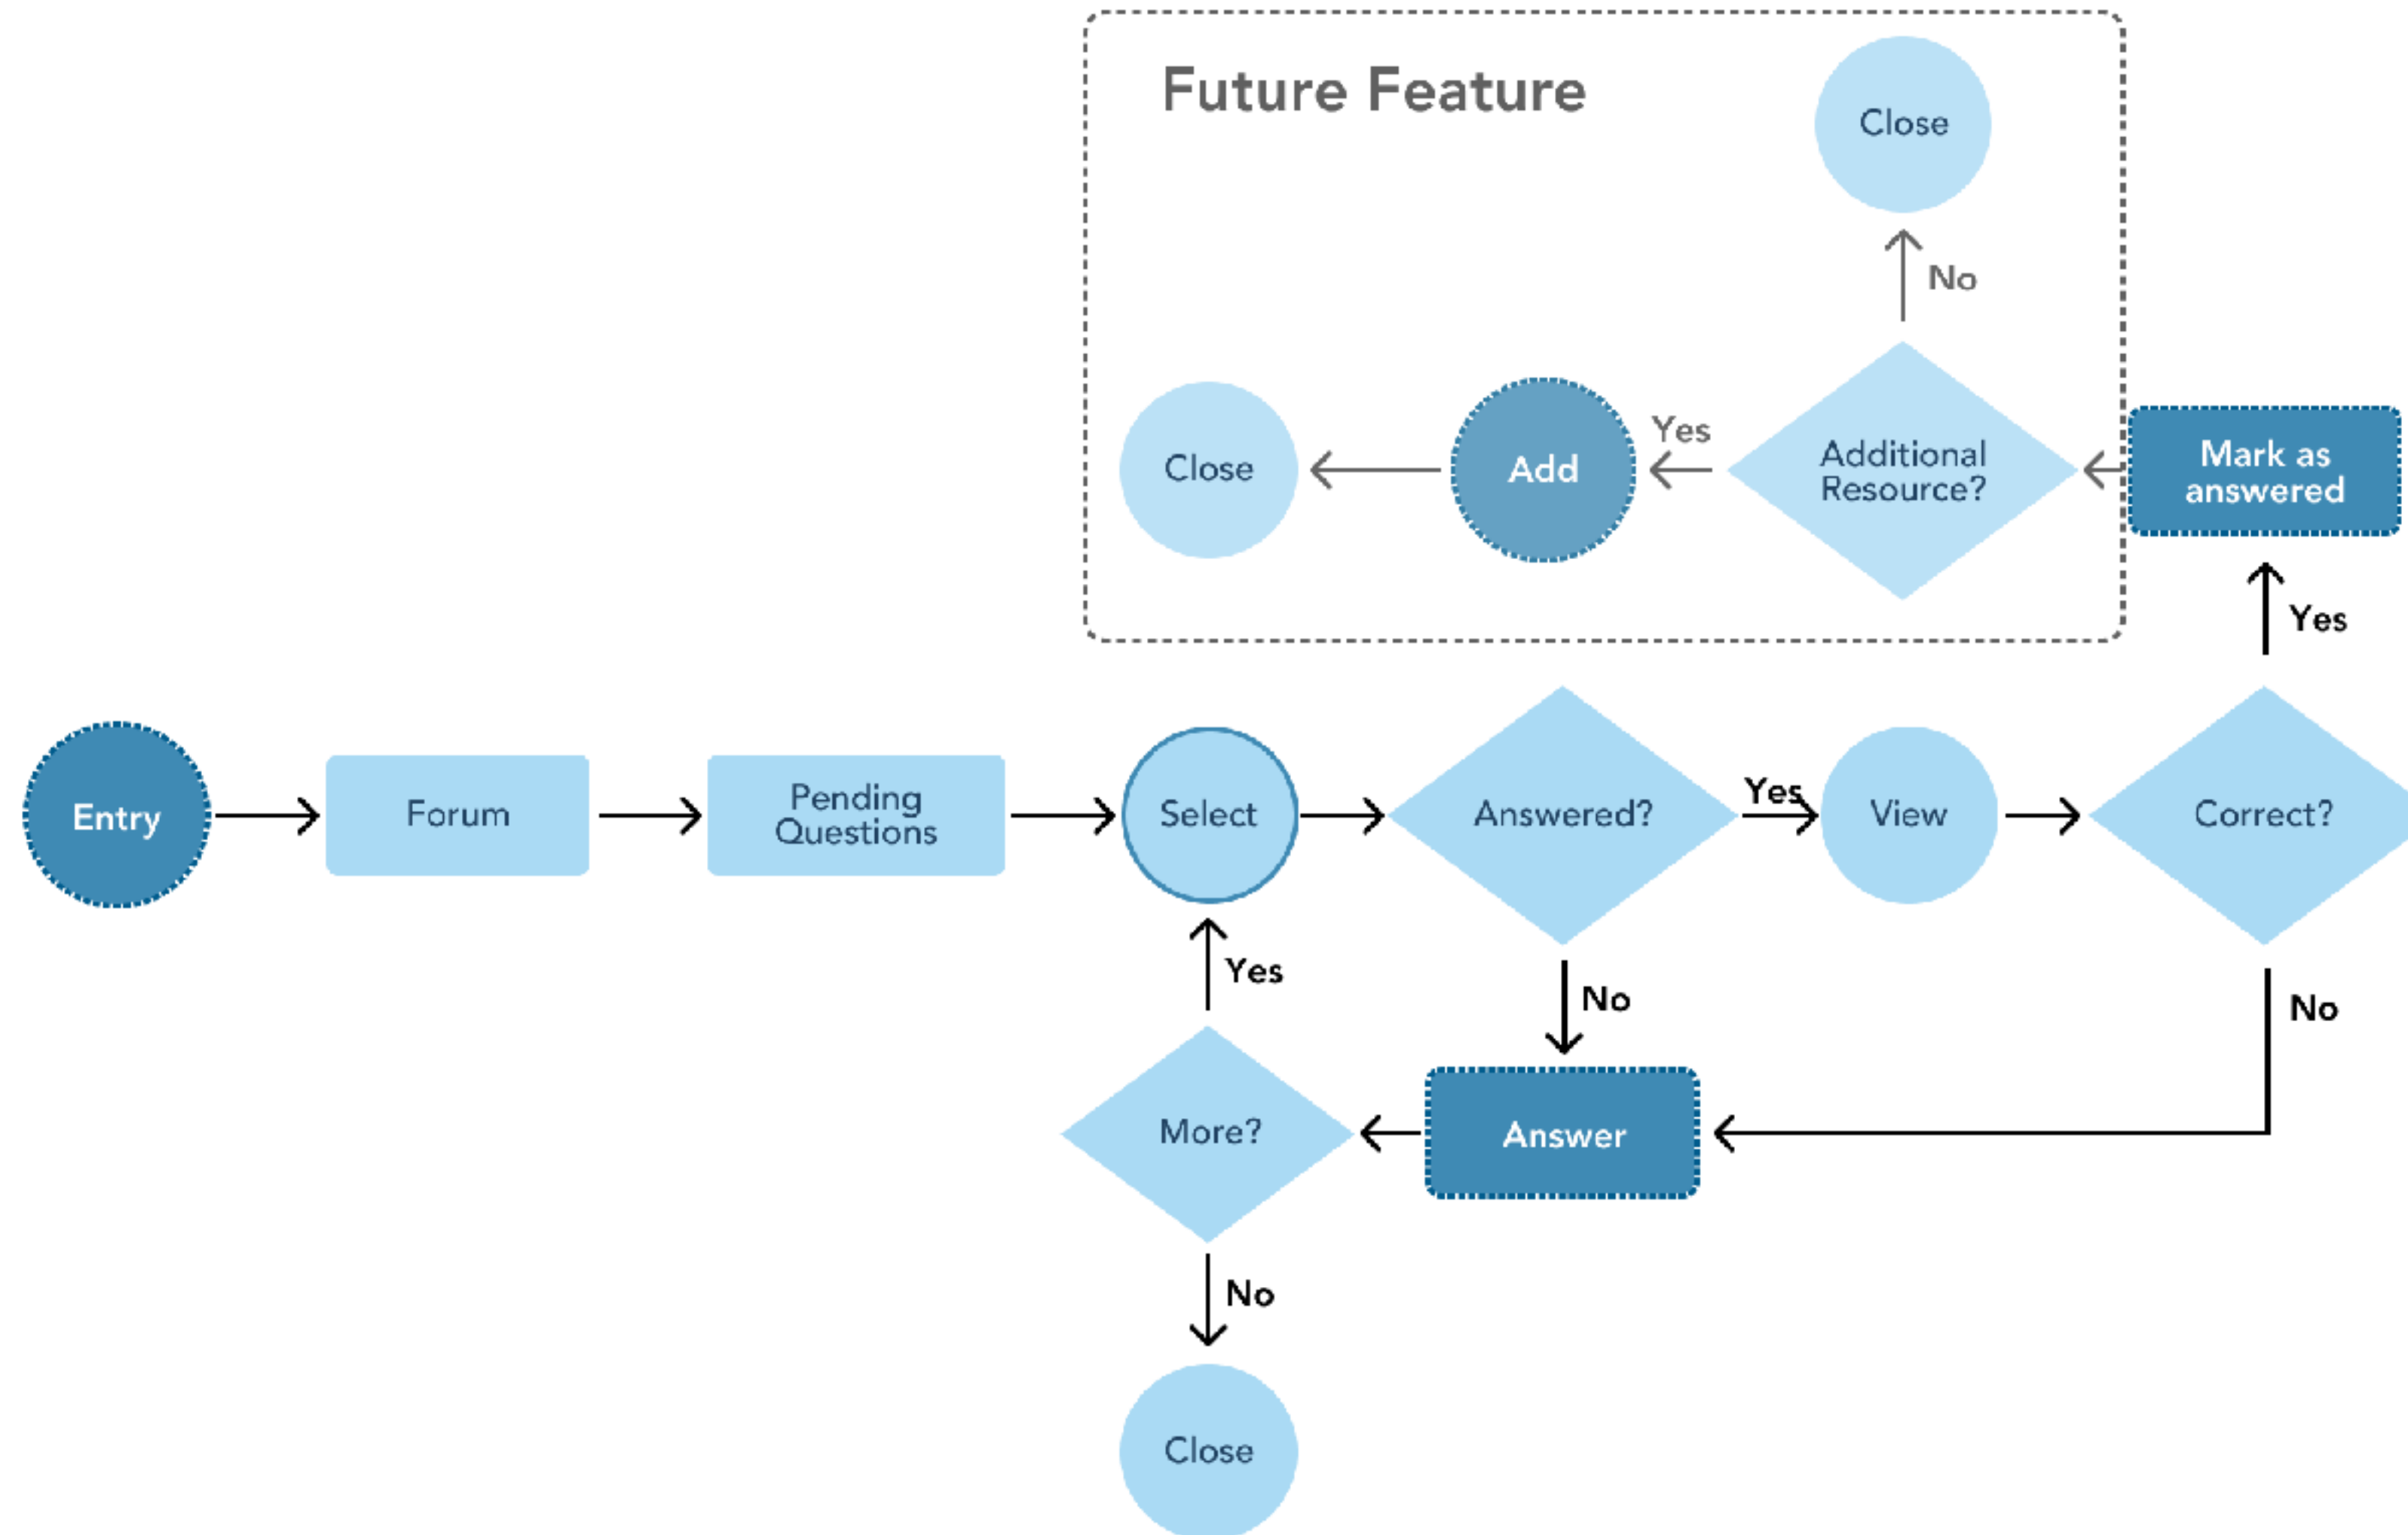

- INDIV STUDENTS
- COULD HAVE SAME QUESTIONS BUT ANSWER SEPARATELY

USER FLOW (STACK OVERFLOW)

- UPVOTE / VERIFICATION IS A USEFUL FEATURE

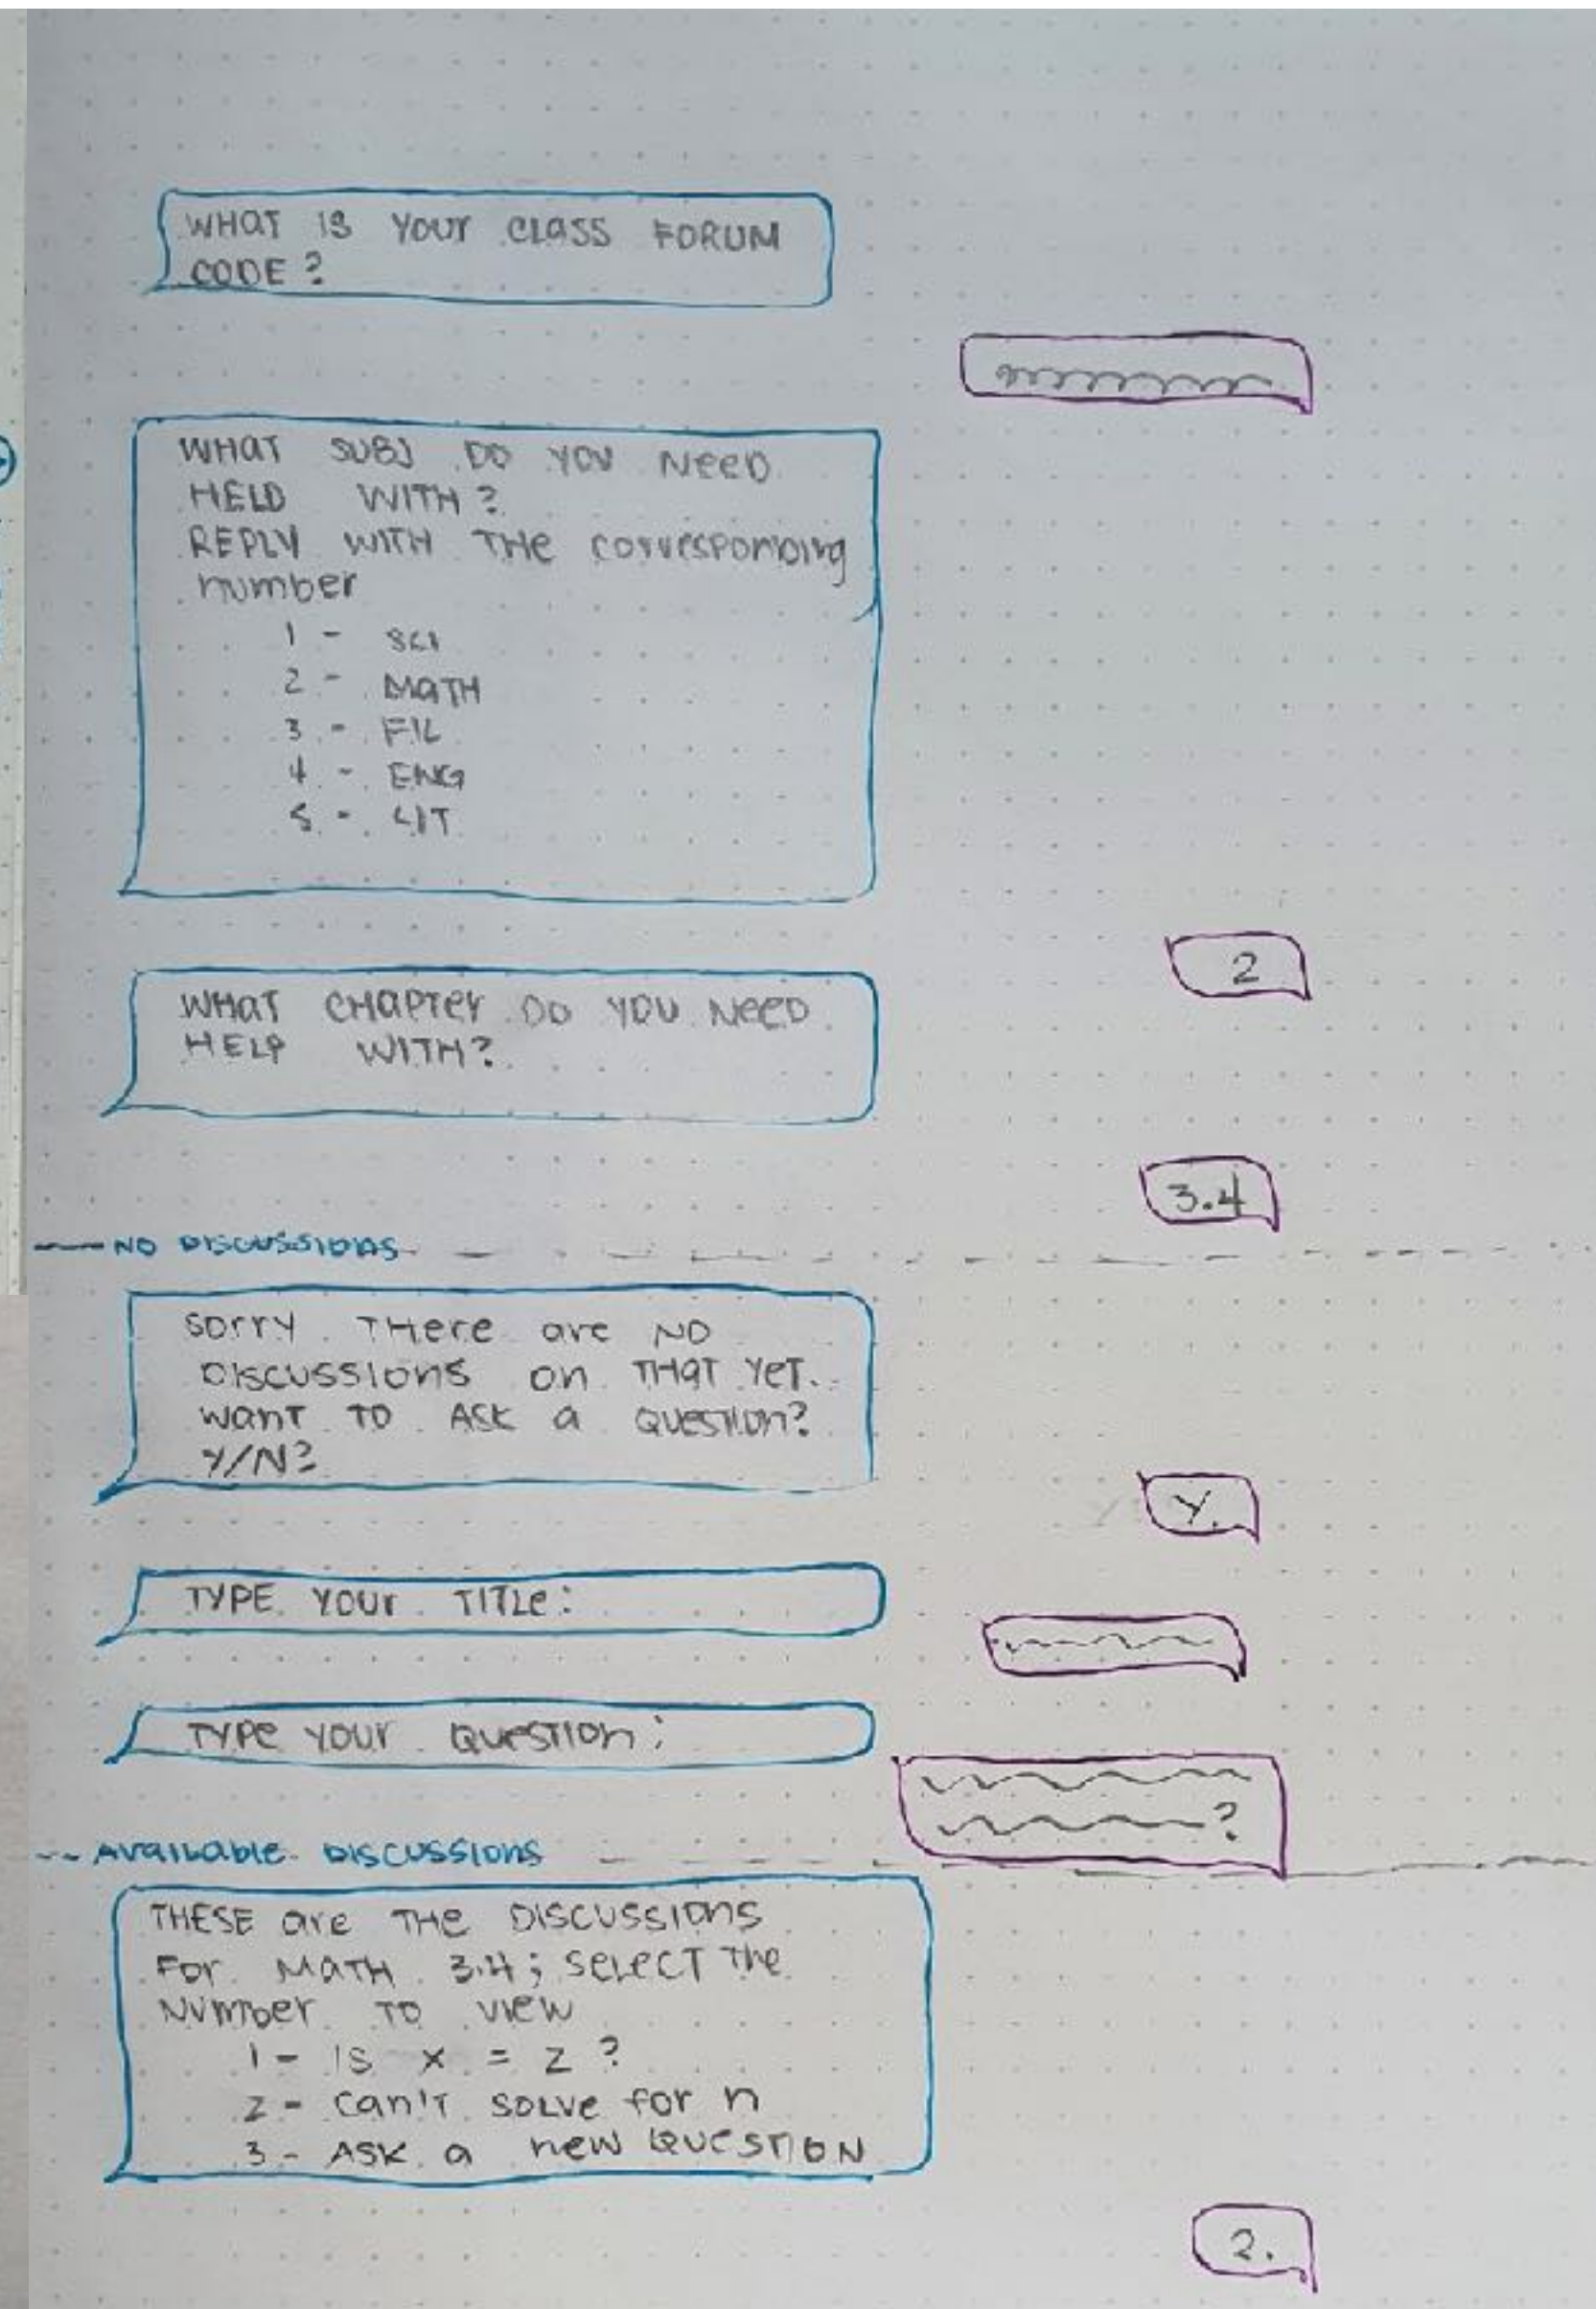

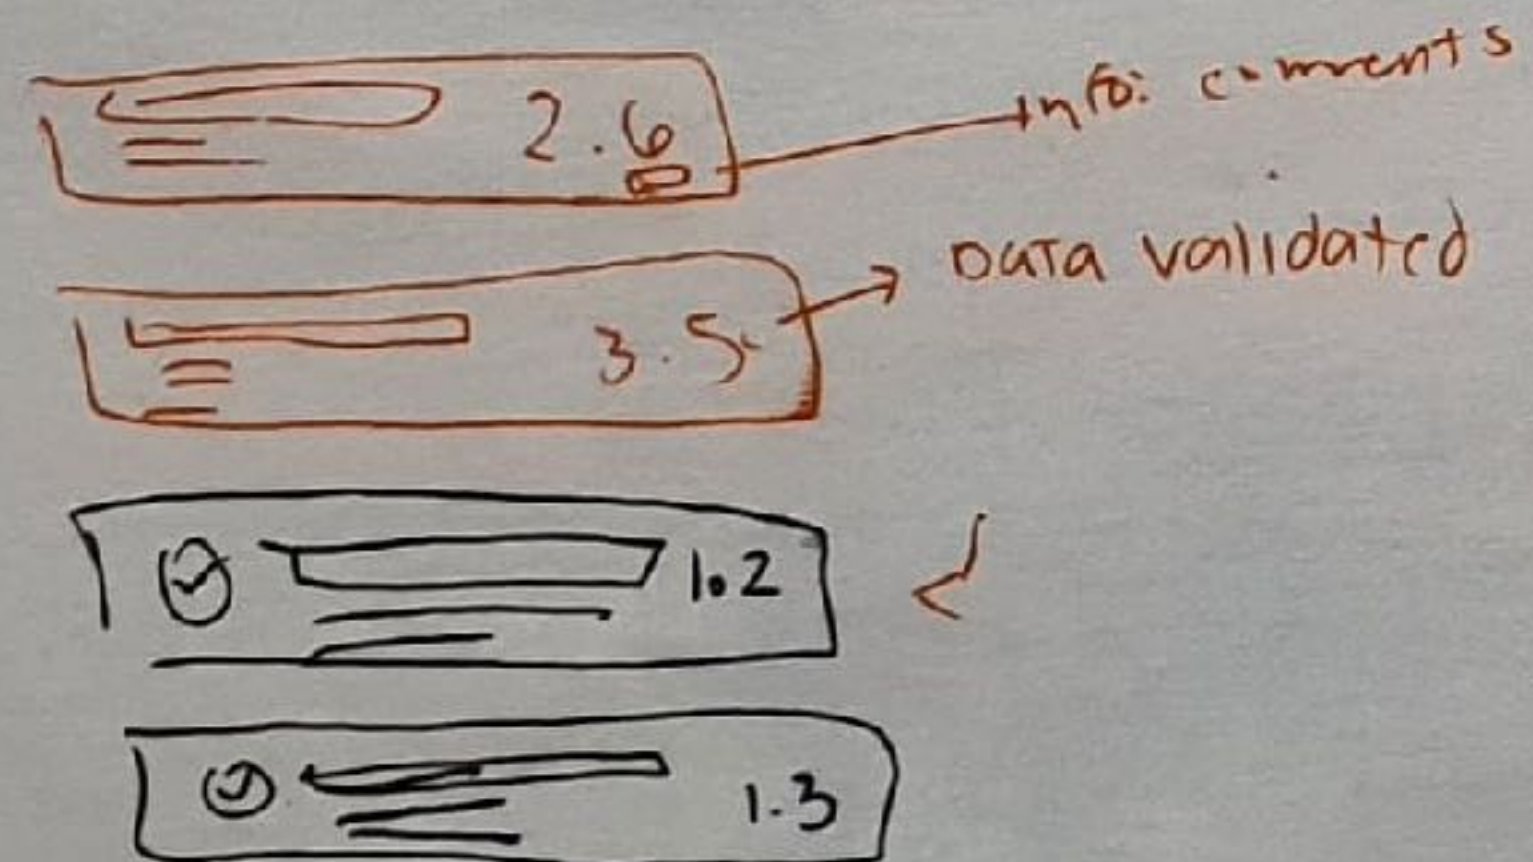

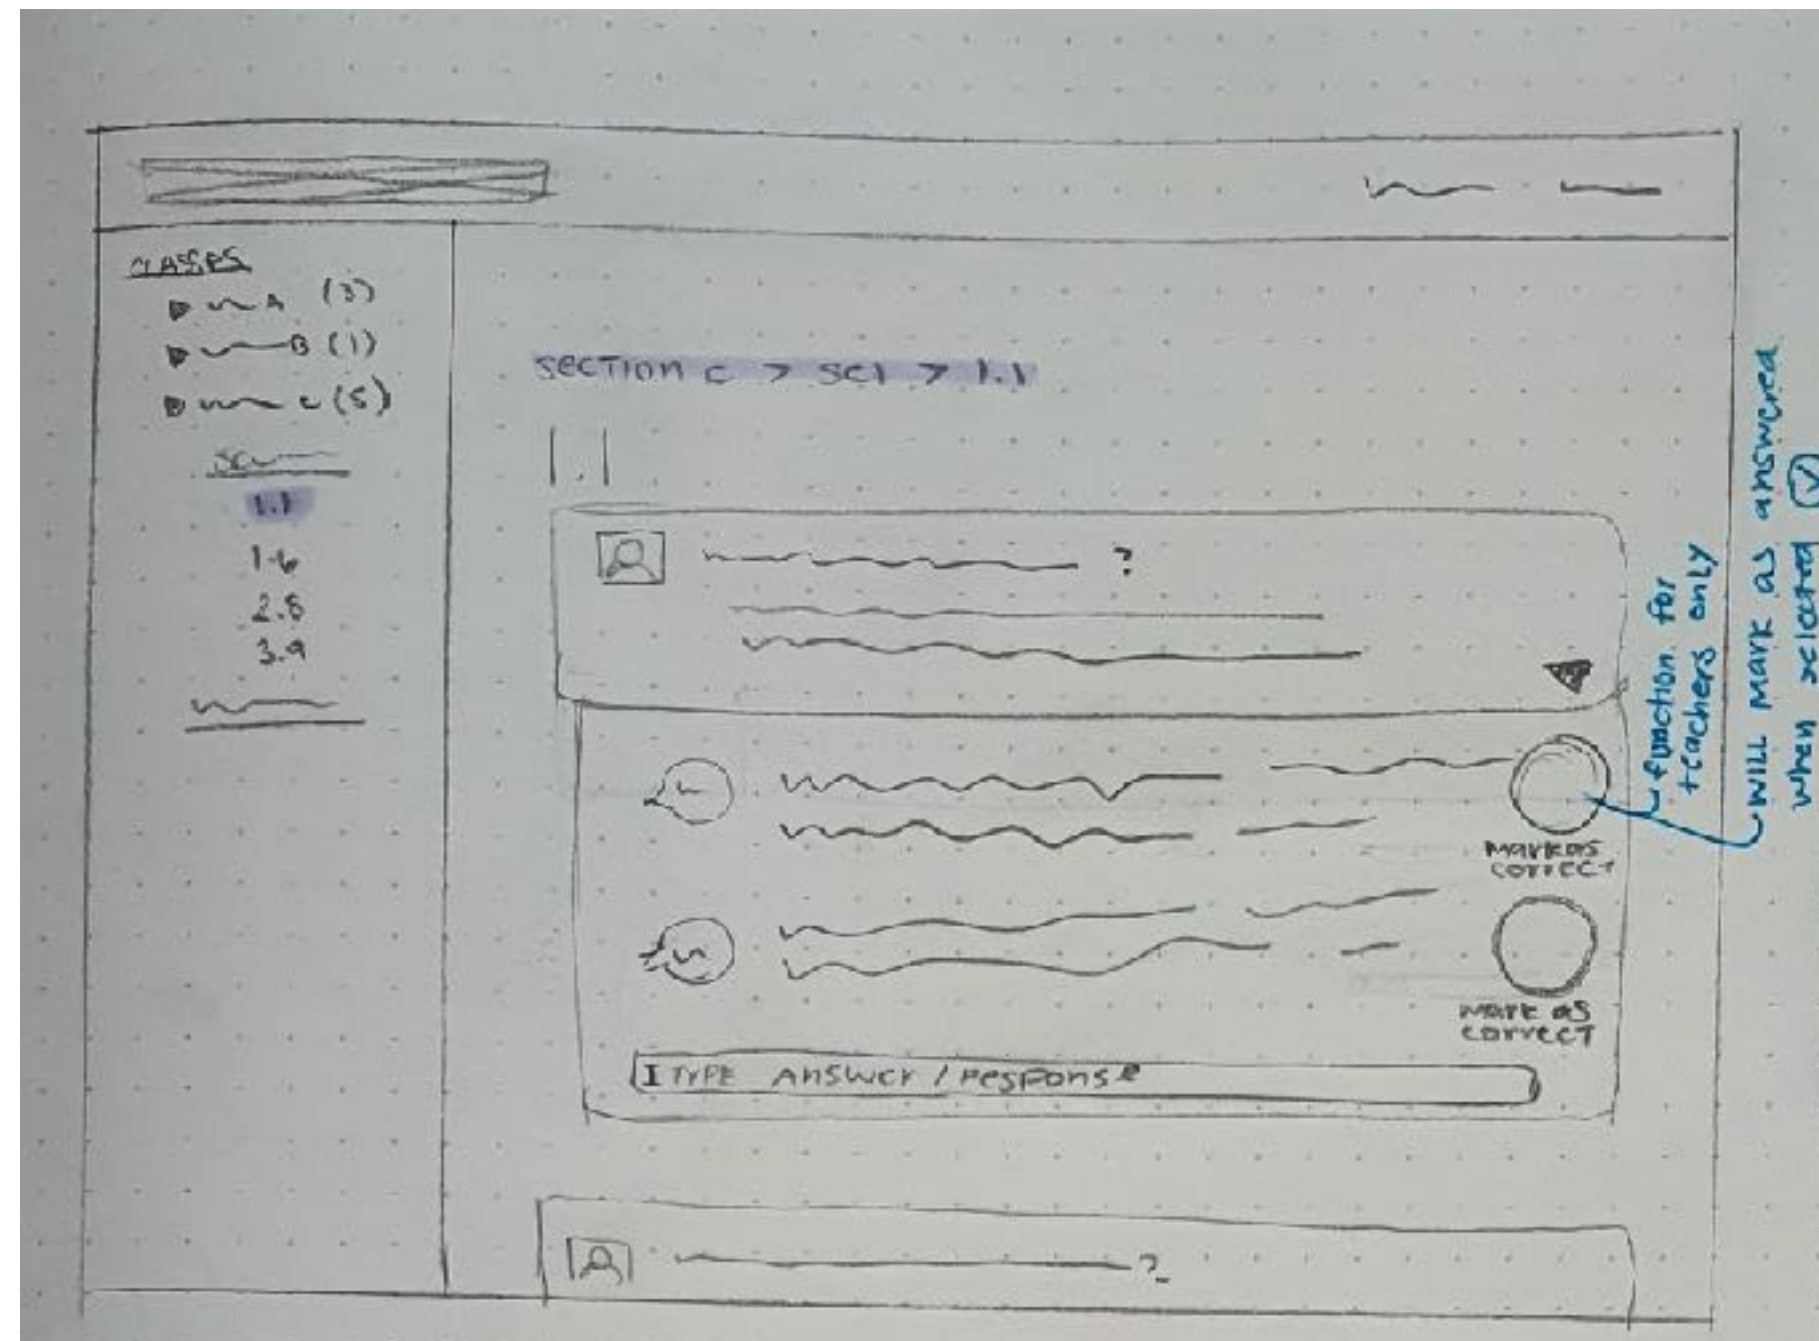

User Flow

Solution

With a better understanding of structure, I set out to create a **design system, wireframes, and a high fidelity prototype.**

Annotated Wireframes

- 1 Clickable Navigation**
This allows the user to easily filter between classes
- 2 Clickable Question**
This brings the user to a page or pop-up that is dedicated to the question
- 3 Breadcrumbs**
Easily tell users where they are and help them return
- 4 Lesson and Chapter (Not Answered)**
Easily organize and filter data by module number according to what is specified in the module.
This is put in big numbers upfront in order to easily identify where the question might come from
- 5 Subject Tag**
Help users identify subject and filter between them
- 6 Image and Answer Info at a glance**
Tells the user how many answers have been provided and if there are images included
- 7 Verified answer**
These are answers either verified by or provided by the instructor or teaching assistant of the class
- 8 Answer**
Answer appears here for questions answered
- 9 Lesson and Chapter (Answered)**
Alternative colors for answered and verified ones to make it easy to identify

Annotated Wireframes

- 1 Add Answer Button**
Button to add an answer - if teacher does this, answer is automatically verified
- 2 Approve Answer Button**
Approve an existing answer instead of having to add one
- 3 Answer View**
This will display answers given by different users

Usability Tests

Prior to conducting tests, I created a **script** and outlined my goals.

(This informed my process of modifying wireframes; however, there were hiccups due to conducting it remotely)

Research Objectives

- Find out if main tasks are achievable
- Identify ideal hierarchy for navigation
- Determine task time (how long user takes on a task)
- Determine learning curve

Usability Goals

- Be able to navigate the page
- Be able to answer questions
- Be able to verify answer

Notes and Lessons

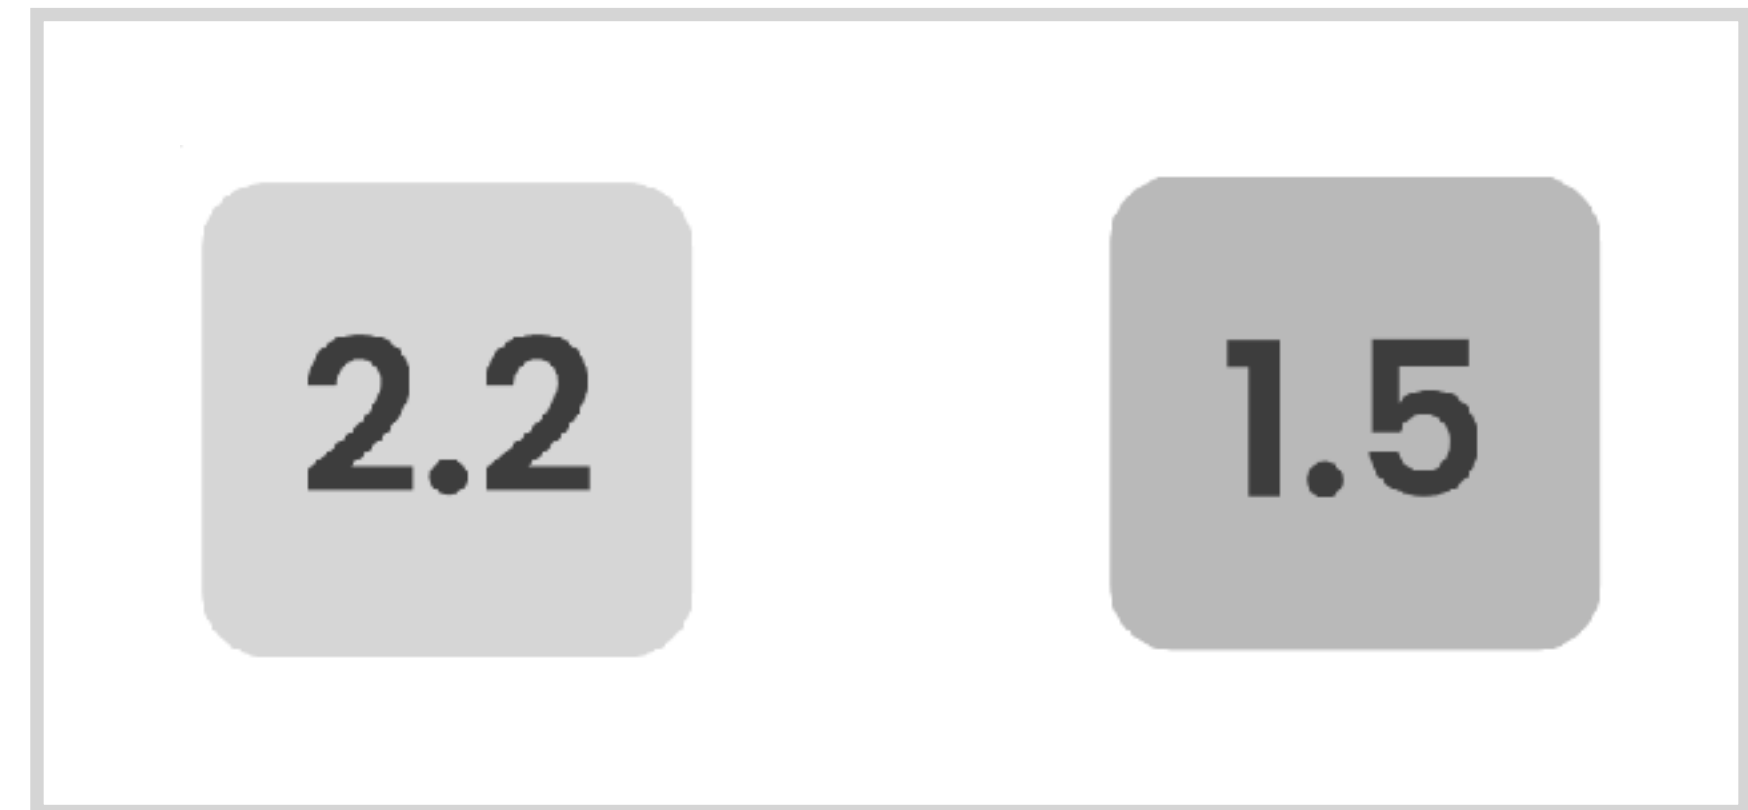

Some notes on usability tests and accessibility.

1) Do not rely on color alone. If possible, use a pattern.

This is more easily distinguishable. . .

than this.

2) Place components strategically.

This is a more efficient use of space...

than this.

I honestly believe that the value provided is 23.5 and the decimal just got left off. I get the same answer you do.

More Lessons...

- 3) For usability tests make the tester's role clear.
- 4) For more permanent actions, confirmations are essential, but for more subtle actions, you can give it a break depending on context.
- 5) It's 100% normal to pivot according to your research when your research challenges your biases.
